

Week 2 - Cheat Sheet

`==` equal to
`!=` not equal to
`>` greater than
`<` less than
`>=` greater than or equal to
`<=` less than or equal to

`=` → Stores, `==` asks

- comparison results are BOOLEAN

AND, OR, NOT

value = 95

→ `print((value > 90) and (value < 100))`

both conditions have
to be true

→ `print((value = 80) or (value > 5))`

only one condition
has to be true

`not (percent < 90)`

→ opposite of the true answer

IF, ELSE, ELIF

① if condition:
 print(output)

② if condition:
 print(true outcome)
else:
 print(second outcome)

③ if condition:
 print(first outcome)
elif 2nd condition:
 print(second outcome)
else:
 print(third outcome)

* indentation

if `a > b`:

 print("Yes") → part of if
 → only print with condition

print("No") → not indented
 will still print

while loops

count = 1

while condition:

 print("Output")

 count += 1

print("done")

- runs while condition is
 true

break - terminates at
the specific
condition

```
for i in range (1, 11, 2):  
    print (i)
```

1, 3, 5, 7, 9

while True :

```
    answer = input ("Answer: ")  
    if answer == "n":  
        break  
    print ("Try again")
```

Continue - skips a specific
value

```
if answer == 3:  
    continue
```

Skips value 3

FOR Loops

```
for i in range (3) :  
    condition  
    print (i)
```

→ 0, 1, 2

range (start, stop)

* stops before last/stop value

range (start, stop, step)
