

Week 1 - Cheat Sheet

```
print("hi")
```

```
print("1", "2", "3")
```

 // - gives the quotient only
% - gives the remainder

blank lines - print()

```
print(10 // 3)
```

```
print(10 % 3)
```

\n - starts new line

\t - inserts a tab

- comment

* use brackets when doing calculations

```
print((value / total) * 100)
```

```
print((10 + 10) / 2)
```

Variables & Types

variable = data

```
amount = 100
```

```
name = "Priyasha"
```

```
count = count + 1
```

 } same thing

```
count += 1
```

- to find type of data:

```
print(type(amount))
```

Input, Casting & f-strings

```
name = input("Please enter name: ")
```

* variables can be reassigned,
the latest change has precedence

- input automatically is data type string

to change data type:

```
print(float(number))
```

```
value = int(input("Enter value: "))
```

Numbers

- float - decimals

- integers

{ " { } " } → formatting strings

operators:

+

*

* you can multiply String & integer

{ " { value : . 2f } " } → 2 dp

{ " { value : > 10 } " } → right align - 10 space

{ " { value : + > 10.2f } " } → always shows sign

Week 1 - Check Sheet

- > - right align
- < - left align
- ^ - centre align

* division by zero error
